

Complete Documentation: VS Code Installation to GitHub Project Push

This guide is beginner-friendly and can be shared with students during Day 1.

Step 1: Install VS Code

Download VS Code

Visit:

[Visual Studio Code](#)

Installation Steps

1. Click **Download for Windows**
2. Open downloaded file
3. Click **Next**
4. Accept License Agreement
5. Click **Next**
6. Select:
 - Add "Open with Code" action
 - Add to PATH
7. Click **Install**
8. Click **Finish**

Verify Installation

Open VS Code.

If VS Code opens successfully, installation is complete.

Step 2: Install Git

Download Git

Visit:

[Git Official Website](#)

Installation Steps

1. Click Download
2. Open installer
3. Keep default settings
4. Click Next until Install
5. Finish Installation

Step 3: Verify Git Installation

Open Command Prompt.

Run:

```
git --version
```

Expected Output:

```
git version 2.xx.x
```

Step 4: Create GitHub Account

Visit:

[GitHub](#)

Sign Up

1. Click Sign Up
2. Enter Email
3. Create Username
4. Create Password
5. Verify Account

Step 5: Configure Git

Open Terminal or Command Prompt.

Run:

```
git config --global user.name "Your Name"
```

Example:

```
git config --global user.name "Harinath"
```

Run:

```
git config --global user.email "yourmail@gmail.com"
```

Example:

```
git config --global user.email "harinath@gmail.com"
```

Verify:

```
git config --list
```

Step 6: Create First Project Folder

Create folder:

Personal-Portfolio

Open VS Code.

Click:

File → Open Folder

Select:

Personal-Portfolio

Step 7: Create Project Files

Create:

Personal-Portfolio

```
|
├── index.html
├── style.css
└── images
```

Example HTML:

```
<!DOCTYPE html>
<html>
<head>
  <title>My Profile</title>
</head>
<body>
  <h1>Welcome to My Website</h1>
</body>
</html>
```

Save file.

Step 8: Install Live Server Extension

Inside VS Code:

1. Click Extensions Icon
2. Search:

Live Server

3. Install
4. Right Click index.html
5. Click:

Open with Live Server

Website opens in browser.

Step 9: Create GitHub Repository

Login to GitHub.

Click:

New Repository

Repository Name:

personal-portfolio

Keep:

Public

Click:

Create Repository

Step 10: Open Terminal in VS Code

Open Terminal:

Terminal → New Terminal

Step 11: Initialize Git

Run:

```
git init
```

Output:

```
Initialized empty Git repository
```

Step 12: Check Status

Run:

```
git status
```

Shows untracked files.

Step 13: Add Files

Run:

```
git add .
```

This stages all files.

Step 14: Create First Commit

Run:

```
git commit -m "Initial project setup"
```

Output:

```
1 file changed
```

Step 15: Connect Local Project to GitHub

Copy repository URL from GitHub.

Example:

```
https://github.com/username/personal-portfolio.git
```

Run:

```
git remote add origin https://github.com/username/personal-portfolio.git
```

Verify:

```
git remote -v
```

Step 16: Rename Branch

Run:

```
git branch -M main
```

Step 17: Push Code to GitHub

Run:

```
git push -u origin main
```

GitHub may ask for authentication.

Complete login.

Step 18: Verify on GitHub

Refresh repository page.

You should see:

```
index.html  
style.css  
images/
```

Your project is now live on GitHub.

Daily Workflow After This

Whenever you make changes:

Check Changes

```
git status
```

Add Changes

```
git add .
```

Commit Changes

```
git commit -m "Updated profile section"
```

Push Changes

```
git push
```

Professional Git Workflow Summary

```
git status
git add .
git commit -m "Your Message"
git push
```

Remember this sequence:

Edit → Add → Commit → Push

This is the same workflow used by professional developers in companies and startups every day.
