

# Real-Time Project Building

Today, students move from learning concepts to **building real projects**. Using HTML, CSS, Flexbox, Responsive Design, and Animations — all in one session.

## HTML

Structure & Semantics

## CSS

Styling & Layout

## Flexbox

Responsive Grids

## Animations

Hover & Transitions

# Choose Your Project

Each student picks **one project** to build from scratch today. Every option covers the same core skills — choose what excites you most.

## Portfolio Website

Showcase your skills, projects, and contact info.

## Restaurant Website

Promote a food business with menus and reviews.

## College Event Page

Build an event page with schedule and registration.

## Gym Website

Dark-themed site with trainers and membership plans.

OPTION 1

# Portfolio Website

A personal website to **showcase your work** and land your first placement opportunity.

## Sections to Build

- Navbar + Hero Section
- About Me + Skills
- Projects + Contact + Footer

## Skills Practiced

- Responsive design & Flexbox layouts
- Hover effects & clean UI design

## OPTION 2

# Restaurant Website

Design a **visually rich food business site** with mouth-watering cards, reviews, and a contact section.

## Sections to Build

- Hero Banner + Menu Section
- Special Dishes + Customer Reviews
- Contact Details

## Skills Practiced

- Card design & background styling
- Flexbox positioning & responsive layout

# More Project Options

## OPTION 3

### College Event Page

- Event title, speakers & schedule
- Countdown-style banner
- Registration button
- Semantic HTML, tables & forms

## OPTION 4

### Product Landing Page

- Product image, description & features
- Pricing + Buy button
- Product cards & Flexbox layouts
- Hover effects & responsive design

## OPTION 5

### Gym Website

- Hero section, trainers & plans
- Contact form
- Dark theme UI & animations
- Background images & Flexbox sections

# Folder Structure & Clean Code

## Recommended Structure

```
project-folder/  
├──  
├── index.html  
├── about.html  
├── style.css  
├── images/  
└── assets/
```

## Why It Matters

### → Easy Maintenance

Find and update files quickly.

### → Professional Workflow

Matches real-world team practices.

### → Faster Debugging

Isolated files mean fewer conflicts.

❗ Best practices: proper indentation, meaningful class names, separate CSS file, and no unnecessary code.

# Reusable Sections & Responsive Layout

## Reusable Card Pattern

Use the **same card style** for products, services, team members, and benefits. Saves time, ensures consistent design, and keeps your code clean.

## Responsive Breakpoint

```
.cards {  
  display: flex;  
  gap: 20px;  
}  
  
@media screen and  
(max-width: 768px) {  
  .cards {  
    flex-direction: column;  
  }  
}
```

# Styling Improvements

Small CSS upgrades make a **huge visual difference**. Apply these techniques to every project for a modern, polished look.

## Card Styling Code

```
.card {  
  padding: 20px;  
  border-radius: 10px;  
  box-shadow: 0 0 10px gray;  
  transition: 0.5s;  
}
```

```
.card:hover {  
  transform: translateY(-10px);  
}
```

### Colors & Fonts

Set a consistent palette and readable typography.

### Padding & Shadows

Add breathing room and depth to every element.

### Hover Effects

Lift cards on hover for an interactive, modern feel.

# Observation During Project

1

## Review Student Code

Check HTML structure, CSS styling, responsiveness, and folder organization.

2

## Explain Mistakes

Address missing closing tags, wrong Flexbox usage, overflow issues, and alignment problems.

3

## Teach Debugging

Use Inspect Element to resolve CSS conflicts, image path issues, and responsive bugs.

4

## Improve UI Design

Guide students on better spacing,
